

Week 2

This week we have already the 5th guipure edging. Next week we start with another lace type. We surely come back on the guipure laces. There are still so much edgings and insertions of this type to explore.

This edging has been designed by Christa van Schagen. It is to be made with 18 pairs of bobbins with DMC Fil de Dentelle 80 or similar.

As you can see on the picture, variations can be made in the edging. Wheat ears can be made on several places instead of plaits.

Between the places where the workers go from the tape to the other side or the edging, the four plaits cross each other in a 8-pairs crossing. See the drawing for the working method.

Have fun this week with the edging!
